destroyed/abandoned 

\$2.1bn

estimated cost of helicopter losses

 Russian helicopter crews have demonstrated ineffective tactics and terrain flight techniques, resulting in Ukraine damaging, destroying, or capturing at least 127 Russian helicopters. These incidents often involve ground-based and shoulder-mounted anti-aircraft missiles. Among the losses are 56 KA-52 attack helicopters, representing over half of Moscow's operational fleet of 90 such aircraft. The Russian forces' inability to coordinate helicopter support in combined-arms operations with armored offensives has also led to substantial tank losses.
